https://www.peopleperhour.com/freelance-jobs/technology-programming/programming-coding/we-need-a-wix-developer-to-develop-our-new-website-4294233?id=4294233

Project Overview
The current website is built using Wix.com but is not fully optimized for mobile responsiveness. As a significant portion of users access the site through mobile devices, it is critical to address these frontend issues.

Additionally, I propose evaluating the database structure to ensure compatibility with potential future functionalities. Should limitations arise, I recommend developing a new frontend in React and backend APIs using Node.js or Laravel, depending on specific requirements.

To finalize the technical approach, I suggest a detailed discussion to outline objectives and scope.

Proposal Details

Phase 1: Wireframe Development
- Collaborate to design wireframes for new functionalities, including:

- User signup and profile management.
- A product store for listings.

- Improved member area navigation.

- Collect and evaluate answers from client before navigating to a specific page.

Phase 2: Static UI Implementation
- Develop the static UI on Wix with core components (e.g., text fields, buttons, and images) based on the agreed wireframes.

- Ensure smooth navigation between pages.

Phase 3: Backend API Integration
- Analyze and update the database structure for new functionalities.

- Develop and integrate Wix APIs for all necessary components.

Phase 4: Testing and Debugging
- Conduct a detailed review of the existing website's functionality.

- Perform thorough testing of new features.

- Address any bugs or issues promptly.

Phase 5: Delivery and Maintenance
- Provide regular progress updates on Tuesdays and Fridays.

- Ensure seamless delivery and offer post-delivery support.

Proposed Timeline
- 2 Weeks: Collaboration, analysis, development, and implementation.

- 1 Week: Testing and resolving identified issues.

I am confident that my expertise in web development and my understanding of responsive design will help enhance your website's performance and user experience. I look forward to discussing the project in more detail.

Best Regards,

Aleksander Balos
